

Mission Statement

We offer a modern and forward-looking education.

Our educational function cannot be confined to the sole transmission of factual knowledge. Facing the full scope of today's labour market, we provide our students with firm fundamental values and the necessary key qualifications. We develop forward-looking and practical educational programmes, involving the employing firms. The students receive training appropriate to the requirements of both business and administration. The students are offered the possibility to earn additional qualifications both within the school and involving exterior certificates. They are thus able to succeed on the job market.

We take responsibility.

By involving parents and employers, we support a policy of cosmopolitanism and active partnership. Our work is built on a fundament of clear pedagogic and professional principles, while also taking into account the economic framework. We are leading the way to develop new focal points of education to guarantee competitiveness.

We are a team.

Our abilities and experience, as well as our commitment and social skills are the essential parameters of a successful implementation of our educational function. We meet its challenges with decisiveness and willingness to cooperate. We maintain a strong customer focus and professional competence. To guarantee these standards, we follow a sustainable personnel development system, involving both recruiting and training.

We support our students as they realise their goals.

Our students are met with appreciation; they are at the centre of our attention and form the focus of our work. We offer a network of expertise, multidisciplinary information and contacts. We also provide psychological and emotional support. It is our conviction, that the motivation, competence and innovative spirit of our students are essential characteristics of a good school. By guaranteeing a motivating environment for learning and teaching, we provide a stable base for our students' personal growth. Mobility and exchange programmes as well as cooperation with the economy encourage entrepreneurship and acquiring key qualifications.
